

Dockside crane operator (mobile and fixed)

At both shipyards and construction sites, the mobile and fixed dockside crane operator is subject to great demands when it comes to safe and responsible working. It is therefore essential that employees comply with the latest Health & Safety requirements and are certified. In this course, participants learn how to work safely and efficiently with the lifting equipment and how loads must be rigged.

Inhoud

- types and models of cranes
- lifting plans
- safety aspects of lifting equipment
- working loads, test loads, breaking strength, use factor and lifting equipment
- lifting equipment certificates
- rejection standards
- estimation of load masses
- safe rigging of loads
- the use of walkie-talkies, hand and arm signals
- daily maintenance
- basic know-how of diesel engines, hydraulics and electro-technology
