

# Container forklift truck driver – elementary and refresher

Forklift trucks for containers are used for loading and unloading containers and to move containers to storage- and transshipment locations. A spreader and a toploader are attached to a forklift truck in order to pick up containers. A container forklift truck supplies and delivers containers to, for example, trucks, rail wagons and ship transshipments. A forklift truck driver has to meet high requirements regarding the safety and responsibility of his work. Moreover, an employee should be able to meet the latest safety regulations regarding the working conditions act. Furthermore, a driver should be well educated and should have decently instructions. Eventually, a participant will receive a certificate if he completed the practical assessment successfully.

**Content**
